</body>
</html>

```

Output

The screenshot shows a Google Chrome browser window with a calculator interface. The calculator has a display showing "0". Below the display is a grid of buttons for digits 0-9, arithmetic operators (+, -, *, /), and a "=" button. The browser's address bar shows the file path "/home/eesha/Projects/exc6/index.html".

Below the browser window, the text "Exercise 6 - 24/Sept/2020" is displayed, followed by "by - Eesha Shetty(18BCE0857)". Under the heading "Questions", there is a list of nine tasks:

1. Take two numbers as input and perform addition, subtraction, multiplication and division on them.
2. Find the factorial of a given number
3. List the fibonacci sequence upto a given number
4. Take a string as input and find if it is a palindrome or not
5. Find if a given number is prime or not
6. Calculate the grade using the mark given as input
7. Display a greeting according to the time - Good Morning, Afternoon, Evening or Night
8. Create a textarea 4 rows and 30 columns wide. Create a button. On clicking the button modify the text properties of the text area like make it bigger, change it to a different color, underline it and two more effects of your choice
9. Design a calculator. It should also look like a calculator. (only design)
